

# Building Microservices

---

## GETTING STARTED WITH BUILDING MICROSERVICES

**Mark Heath**

CLOUD ARCHITECT

@mark\_heath [www.markheath.net](http://www.markheath.net)

# Microservices on Pluralsight

This course is part of the **microservices learning path** on Pluralsight

## Microservices Fundamentals

by Mark Heath

Time	Health	On state from	Last execution
WebMVC HTTP Check	Unhealthy	Unhealthy a few seconds ago	10/19/2019, 9:23:05 AM

In this course, you'll learn about several key principles and practices that will enable you to successfully architect, build, and deliver microservice applications that are scalable, flexible, resilient, and secure.

<https://app.pluralsight.com/library/courses/microservices-fundamentals>

Architecting  
microservices

Building  
microservices

Communicating  
between  
microservices

Securing and  
delivering  
microservices

# In This Course

## Domain Logic

How to structure the code?

Data mapping

## Testing

Types of tests  
Combined strategy

## Authorization

Inter-service communication  
Security

# Overview

**Microservices give us flexibility and freedom**

**Value of standardization**

**eShopOnContainers sample application**

- Architectural overview
- How to run it locally with Docker

# What Are Microservices?

**autonomous,  
independently  
deployable** services...

...**collaborate** to  
form an **application**

They are **small** enough to be  
rewritten if necessary

They **own** their own data

Other microservices can only access  
that data through the **public API**

Avoid **breaking** changes to the API

# Microservices Give You Options

## Programming Language

In this course: C#

Java, Node.js, Python, Go, etc.

## Database

Relational (e.g. SQL Server)

Document (e.g. Mongo)

In-memory (e.g. Redis)

## Communication Style

HTTP-based web API

Messaging via an event bus

RESTful APIs, gRPC

## Hosting Platform

Docker and Kubernetes

Serverless Functions-as-a-Service

Directly on Virtual Machines

# Flexibility and Freedom

**Choose the best tool for the job**

**Adopt new technologies**

**Avoid getting stuck on legacy frameworks**

# Benefits of Standardization

Developer  
productivity

Consistent approach to  
deployment and monitoring

Logging

Health checks

Configuration

Authentication

Microservices give you **freedom** to choose the best tool for the job

Microservice applications benefit from **standardization** to boost developer productivity

Introducing our demo application:  
**eShopOnContainers**

# https://github.com/dotnet-architecture/eShopOnContainers

dotnet-architecture / eShopOnContainers

📊 Insights

Easy to get started sample reference microservice and container based application. Cross-platform on Linux and Windows Docker Containers, powered by .NET Core 2.2, Docker engine and optionally Azure, Kubernetes or Service Fabric. Supports Visual Studio, VS for Mac and CLI based environments with Docker CLI, dotnet CLI, VS Code or any other code ...

Latest commit 86f7d53 8 days ago

📁 <a href="#">Components</a>	Add GeolocatorPlugin-1.0.3 to IOS and Windows project	2 years ago
📁 <a href="#">ServiceFabric</a>	Added SF sln for gruping all sf projects	2 years ago
📁 <a href="#">build</a>	updated build def for webspa, mvc & status	3 months ago
📁 <a href="#">cli-linux</a>	Improve build-bits-linux.sh (removed dotnet restore (doing with publi...	2 years ago
📁 <a href="#">cli-mac</a>	Update project list in mac build script	2 years ago
📁 <a href="#">cli-windows</a>	Updateded to Show Message to run as administrator	5 months ago
📁 <a href="#">deploy</a>	typo	8 months ago
📁 <a href="#">docs/Decks</a>	e-books moved to https://github.com/dotnet-architecture/eBooks	8 days ago

**E-commerce**

**Non-trivial**

**Actively Maintained**

**Containerized**

**Cross-platform**

**Great documentation**

# eShopOnContainers Tech Stack

ASP.NET  
Core

C#

Microservices principles can be applied in **any** programming language

# eShopOnContainers Architecture

# Development Environment Setup

1

Install **Docker Desktop** (Windows or Mac)

<https://www.docker.com/products/docker-desktop>

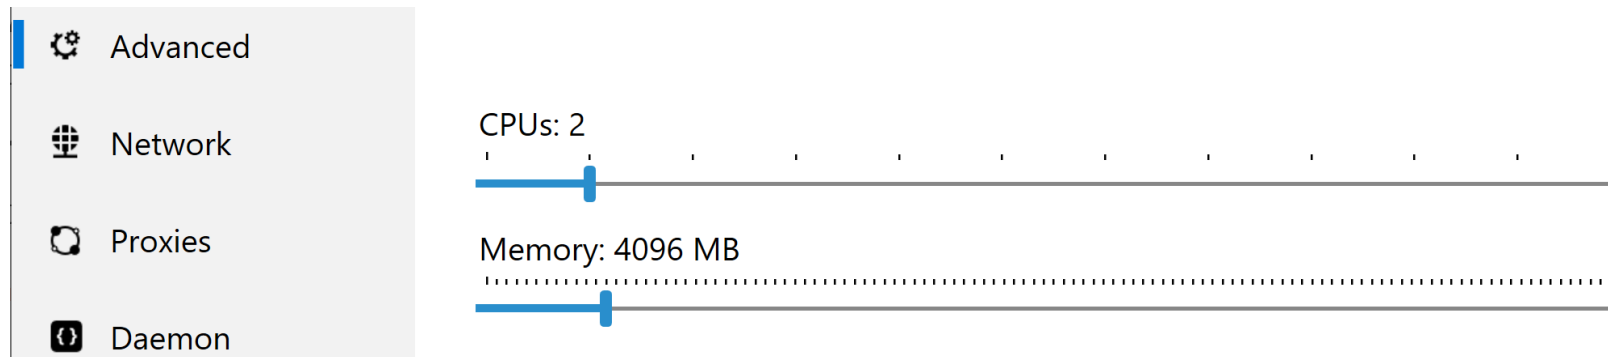

2

Clone **eShopOnContainers** source code

`git clone https://github.com/dotnet-architecture/eShopOnContainers.git`

3

Increase Docker Desktop **available memory** to 4GB (in Advanced Settings)

4

Configure Windows **firewall** rules (using supplied PowerShell script)

`.\cli-windows\add-firewall-rules-for-sts-auth-thru-docker.ps1`

# Demo

## Running eShopOnContainers locally

- docker-compose up
- docker-compose.yml

# Summary

Microservices give us freedom to choose the best tools for the job

Standardization can simplify development, deployment and monitoring

eShopOnContainers sample application

- ASP.NET Core and C#
- Standardized logging and health checks
- Different technologies (e.g. databases)

Up next...

Implementing domain logic
