

# Auditing through Event Sourcing

---

**Matthew Alexander**

SOFTWARE ENGINEER

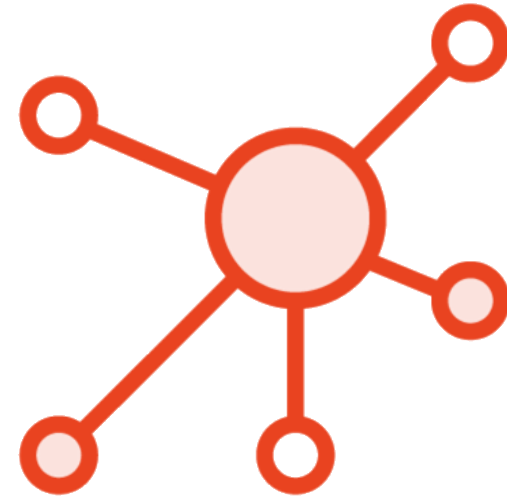

@alexandermj

# Dealing With Request Failures

Logging

Distributed tracing

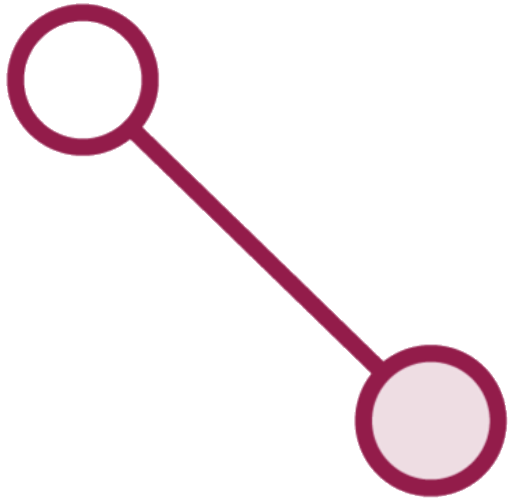

# Logging

**Show that the program is  
working as expected**

**Output relevant information  
for diagnosing problems**

# Distributed Tracing

Correlate logs about a single operation

Submit translation followed by locking a document

Succeeding operations inherit tracing context

The process of systematically and independently examining source material to ascertain a true and fair view of a given concern.

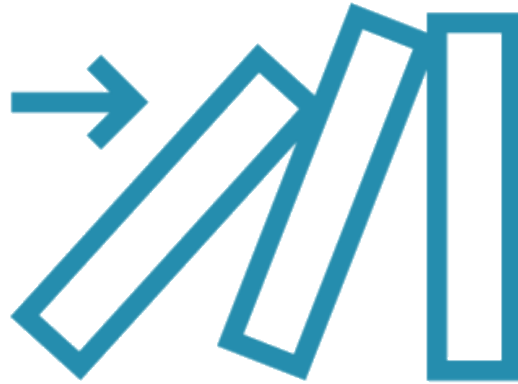

**Wikipedia**

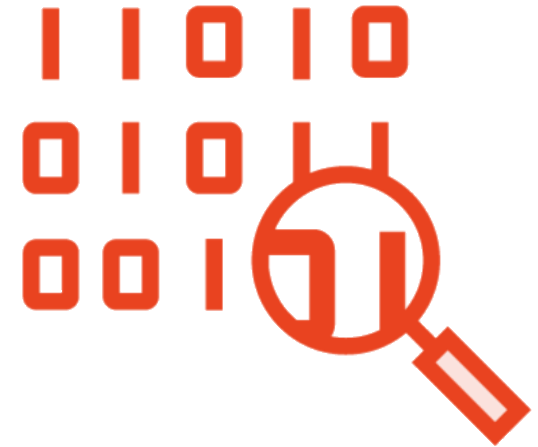

# Auditing in Practice

Financial audit

Computing audit

On call operators  
audit failures and  
introduce preventative  
measures

# Event Sourcing

---

# Event Sourcing

Git

Google Docs, Sheets,  
Slides, etc.

Text editor

# Event Sourcing Gotchas

**Auditing done to perfection**

**Potentially incur large storage costs**

**Capturing and maintaining state can be complex**

**Should be considered local to application**

# Bounded Contexts

**Document service**

**Translation service**

# Service to Service Communication

Global event store

Maintain history of bounded context events

Publishers and consumers

Gives ability to replay events due to failure

Promotes elasticity

# Designing the Message Broker

---

# Available Global Event Store Options

**ActiveMQ**

**Amazon SQS**

**RabbitMQ**

**Many others**

# Global Event Store Components

Topics

Partitions

Apache  
ZooKeeper

Confluent  
Schema  
Registry

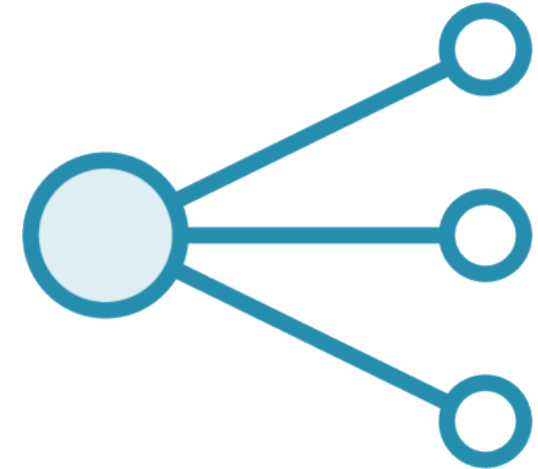

# Apache Kafka Setup

Single Apache  
ZooKeeper server

Single Apache Kafka  
broker

Single Schema  
Registry node

# Installing and Running Docker

---

# Introduction to Docker

Open platform

Focused on containers

Lighter than virtual machines

Reduced performance overhead

Orchestration through Docker Compose

# Implementing Consumers and Publishers

---

# High Level Customer Workflow

**Uploads document to be translated**

**Submits document for translation**

**Cancels the pending request**

**Uploads and submits another revision**

**Monitors translation status**

**Translator accepts translation request**

# Global Events For Consideration

**Document  
submitted for  
translation**

**Cancelling a  
translation request**

**Document locked**

**Document  
unlocked**

**Submission  
accepted**

# Demo: Message Driven Architecture

---

# Summary

Delivered more durable messaging

Achieved a more meaningful stance on reactive principles

Not yet addressed rolling back distributed transactions

Address remaining scenario through SAGAs
